AKAZA Shared Hosting

Overview

A majority of enterprises utilize websites and blogs to engage with their customers and reach potential others. While there is much value to be gained in terms of web content, selecting a suitable web host is critical for several reasons. Revenue generation, and profit maximization primarily, followed by search engine optimization ranking (SEO) so that customers can find an online business presence easily which will serve to improve ranking. Even more essential is ensuring the security of a business website preventing any malware attacks.

With SLT's personalized web hosting solution and state-of-the-art data centre, businesses can now have their own website with minimum initial cost together with superior technical support. A widely used and superior web hosting automation program, Plesk 12 is deployed on both Windows and Red Hat delivering the most personalized packaging of shared hosting.

Functionality

From assisting an enterprise, to finding a domain name, to providing the creation and design tools required to build a website, SLT offers assistance to form relevant e-commerce sites, and make communication easier with e-mail functionality. The upside is that apart from creating visibility for the customer, the business website will also be updated as and when required.

SLT's shared hosting service allows businesses to benefit from technical support around the clock via 24/7 phone and email support as well as better web security which will not be available with free web hosting services. Sensitivity of data is ensured while confirmation of data backup and restoration capabilities are also provided along with DNS management.
